Patient Daily Use

The Moses

Inserting

- 1. It is very important that you clean your teeth properly every night before inserting your appliance to prevent tooth decay and periodontal problems.
- 2. The upper component (clear retainer): Place on your upper teeth and snap into place firmly with your thumbs.
- 3. The lower component (blue acrylic body): Open wide and insert appliance onto lower teeth.
- 4. Engaging: Slide lower jaw forward and bite down to engage the upper and lower components.

The Moses

Removing

- 1. The lower component: Open wide to disengage and slide the lower component out first.
- 2. The upper component: Uses your fingers to remove the upper component. You may have to remove a little on each side until it comes off. This should be a snug fit.
- 3. It is very important that you bite on your back teeth every morning. If it is difficult for your back teeth to touch after being awake for 1 hour, chew a piece of sugarless gum until your back teeth touch. This usually takes only a few minutes.

Adjusting

- 1. There are adjustment screws on both sides of The Moses® appliance. These screws are adjusted by the wrench or key that has been provided to you with the delivery of your appliance. One turn from bar to bar represents 1/8th of 1 mm (8 turns = 1 mm of forward movement).
- 2. Ensure that both screws (right side & left side are turned the same number of times, and in the direction of the arrows.
- 3. If your dentist instructs you to advance your appliance, it is very important that you follow his/her instruction on how many turns and how often you make these adjustments.
